

# GN 2100 Telecoil

- for special needs

- **Telecoil-equipped headset for those with special hearing needs**
- **Filters out unwanted background noise with noise cancelling microphone**
- **Ultra light weight for all-day wearing comfort**
- **Large range of accessories for customising your headset**

The new GN 2100 Telecoil\* makes our superior headset solution available to those with special hearing needs. Now hearing aid users can enjoy all the health benefits and increased work efficiencies that headsets bring.

Designed for hearing aid wearers who want the benefits of headset use, the GN 2100 Telecoil is equipped with a hearing aid-compatible telecoil fitted to the plain side of the earpiece. It works with all standard telecoil-equipped hearing aids. The telecoil cancels out surrounding background sound while heightening the sound quality from the telephone, giving

hearing aid users clearer, crisper phone conversations free from interfering background noise.

Simply switch your hearing aid to the "T" position, and you're ready to use the headset. For best performance, place the plain side of the earpiece as close as possible to your hearing aid. The GN 2100 Telecoil's design ensures all-day wearing comfort, thanks to the light weight flex-boom arm. The noise-cancelling (NC) microphone filters out even more unwanted background noise, making the GN 2100 Telecoil especially ideal in open or noisier office environments.

With the wide range of mix and match accessories, you can even customise your GN 2100 Telecoil headset. Choose between three different sizes of earplates and earcushions, and with a choice from four different clip-on colours, you can reflect your personal style or organise contact centre teams or sales departments.

The GN 2100 Telecoil, bringing the benefits of headsets to people with special hearing needs.
